

Supplemental Figure 2. Female rats with unilateral ureteral obstruction (UUO) display downregulation of AQP2 in ipsilateral kidney. **(A)** Experimental Design. UUO or sham was followed by measurements at the indicated time points. **(B)** Immunoblot for AQP2 in the whole kidney at 0, 6, and 24-hours post-UUO (n=3 per time point). **(C)** Quantification of band density of blot B (n=3 per time point, p values as indicated, one-way ANOVA with post hoc Dunn's Multiple comparison test).
