

Supplemental Figure 5. Time course of dynamics of the P-bodies after UUO. (A) Representative immunofluorescence for P-body scaffold proteins DDX6 and 4E-T (green) in cortical collecting ducts (CCDs) (AQP2 is shown in red) at different time points (sham, 3, 6, and 12 hours) after unilateral ureteral obstruction (UUO). Scale bar=5 μ m. **(B)** Quantification of positively stained area in A. (P values as indicated, ANOVA with post hoc Dunn's multiple comparison test. Error bars indicate SD).
